Live Roof and the Outdoor Learning Center

Installed by Twin Lake Nursery, Inc. and LiveRoof of Spring Lake, Michigan during the summer of 2010, this beautiful living roof area consists of many different grasses and sedums which are listed below. The benefits of the live roof are vast and include reduction of solar intensity, reduction of heating and cooling costs, reduction of noise, reduction of stormwater runoff, increased habitat areas, and increased aesthetics.

Plant Included in the Live Roof Grids

- *Andropogon gerardii ‘Lord Snowden’* – grass
- *Calamagrostis x acutiflora ‘Karl Foerster’* – grass
- *Panicum virgatum ‘Shenandoah’* – grass
