The facility master plan calls for a new creative arts facility with studios and classrooms, gallery, kiln room and labs, as well as improvements to existing performing arts spaces that collectively serve 14 academic areas. The current fine arts building is housed in antiquated, ill-equipped pole barn with inadequate cooling, heating, lighting. The building’s second floor is not handicapped accessible. The lack of walls and storage space negatively impact instruction.

A new arts center will:

- Allow for year-round and evening visual arts instruction and student exhibition space
- Meet MCC’s expected 32% enrollment growth in arts and media over next 10 years
- Support the addition of new programs, such as communication technology/technician
- Bolster MCC’s ability to expand articulation agreements with four-year creative and performing arts institutions
