****DO NOT WAIT ON THIS. GET STARTED IMMEDIATELY!!****

¹ There are three methods of tuberculosis testing

- For the two-step test, you will have two separate tests, several days apart. Each test will need to be read and results documented.
- For the T-spot, you will have only one test that will be read and results documented.
- If you have ever had a positive TB test, you will be required to have a chest x-ray to verify that you do not have TB. *If you have never had a positive TB test, you do not need a chest x-ray.*
